

General Industry

Durlon® Sealing Solutions

Durlon delivers sealing solutions for the stringent demands of general industry. From steam boilers to power plants, we are always committed to help improve machine efficiency, extend equipment life, and reduce maintenance time and costs.

Product Recommendations

Durlon® 7900 is an economy grade general service gasket sheet material made with NBR (Nitrile Bonded Rubber) binder for mild service in piping and equipment with applications in steam, hydrocarbons and refrigerants. An economical alternative when service ranges and applications are not severe.

Durlon® 8700 is a high performance gasket material for use in processes requiring a neoprene (CR) bonded sheet. This product has excellent resistance to ozone, oils, non-aromatic solvents and many refrigerants. Durlon® 8700 has excellent hand and die cutting characteristics and has passed the MIL-G-24696B Navy Adhesion Test (366°F/48 hrs).

Durlon® 9000 is for use in process piping and equipment in chemical, pulp & paper, food & beverage and other general industrial applications where resistance to highly aggressive chemicals is required.

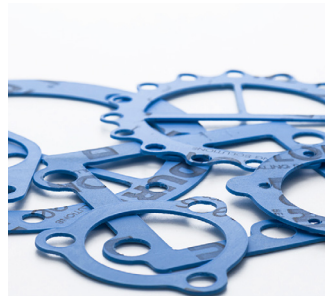

Durlon® Durtec® with Durcore® gaskets are made with a specially engineered corrugated metal core that is bonded on both sides with soft covering layers, typically flexible graphite. The core is produced by patented technology that allows the finished gasket to have the best possible mechanical support function.
