

OEM Services

Durlon® Sealing Solutions

Durlon Gasket Technologies develops and manufactures special and custom made sealing solutions according to customer specifications for various OEM and customized applications. Our dedicated engineers will work with you to create a sealing system fit for your needs, reducing development costs and improving safety.

Durlon is listed as an approved material on many multinational end-user databases which makes it easier for those skid mounted equipment manufacturers to use our products.

Product Recommendations

Durlon® DuraSwell™ 7760 is a sheet gasket material for demanding applications that require excellent seal-ability, conformity to flange surfaces and recovery. This sheet gasket material is designed to swell when in contact with oils and fuels. This helps increase the gasket stress for applications that require increased gasket loading that may previously be limited, due to insufficient bolting or flange constraints.

Durlon® 8500 is a high performance compressed gasket material for use in process industries including pulp & paper, food & beverage, pharmaceutical, hydrocarbon, chemical, refinery and general industry.

Durlon® 9000 is for use in process piping and equipment in chemical, pulp & paper, food & beverage and other general industrial applications where resistance to highly aggressive chemicals is required.

Durlon® Kamprofile gaskets have a solid metal core with concentrically serrated grooves machined into the top and bottom faces. The metal core is typically stainless steel, but it can be supplied in various metallurgies as per the customer's request. The serrated core is covered with soft sealing material and is dependent on the service conditions of the system.
